Project Details:

Description:

The objective of this project is to develop an Android mobile application that provides access to the learning materials for this course. The mobile app should reflect the modular organization of the course content as presented in the D2L web course system.

Specifications include:

1) A top-level module titled "Start Here," which includes the following sub-modules:
  a. "Welcome"
  b. "Syllabus"
  c. "Lab Report Instructions"
  d. "Project Instructions"

2) Another top-level module called "Learning Modules," featuring 13 lesson sub-modules, each containing two child sub-modules:
  a. "Slides"
  b. "Lab"

3) User registration and authentication (this can be implemented as a final step since we will discuss data and security in the concluding week; however, you are encouraged to conduct your research to address this in advance).

You are welcome to be creative with the UI designs.
